Instant Rx: Instant Care for Your Injured Worker with Nominal Administration

Accidents happen. When they do, you want the best, most immediate care for your injured worker. Instant Rx makes this possible by allowing your injured worker

prescription benefits with no waiting and no out-of-pocket expenses.

At the point of injury, covering the first prescription is as simple as handing your worker a card before leaving the work site. With the initial point of pharmacy service, information is auto-populated on the claim and the injured worker. This relieves your injured worker of the stress of delayed pharmacy benefits, financial burden for out-of-pocket expenses and the headache of retroactive claims. Furthermore, you know that your injured worker will be taken care of with minimal administration time.

Preferred Medical Network offers Instant Rx as part of our workers' compensation pharmacy benefits, and we are happy to offer administration and training to clients utilizing the service.

Preferred Medical Network Offers Pharmacy Administration with Distinct Advantages:

- 98% network utilization rate
- 95% pharmacy network penetration nationwide, including national pharmacy chain contracting
- 95% generic prescription utilization
- 100% electronic bill adjudication
- A nationally-recognized program that saves an average of \$16 per prescription compared to prior systems
- No-cost card mailings
- Customized programs and services
- A staff dedicated to your complete satisfaction

Preferred Medical Network offers many additional benefits to facilitate a full and efficient recovery for the claimant, manage costs and capture significant savings. Call today and find out what else we can do for you!

Did you know...

that drug utilization reviews (DUR) accounts for 10-20% cost avoidance in pharmacy claims costs? When implemented correctly, DUR programs can detect inappropriate and/or unnecessarily costly drug therapy. Once identified, interventions can be employed to improve drug use. Common interventions include educational programs, provision of drug information, changes in policies and procedures, and changes in the drug formulary.

Outside of cost savings, DUR can help prevent adverse drug events, helping to safeguard patients. Common safety-related alerts include:

- Drug-drug interaction
- Drug-disease conflict
- Drug-age conflict
- Drug-allergy conflict
- Drug-pregnancy warning
- Drug-gender conflict
- High dosage
- Overuse/excessive duration
- Ingredient duplication
- Excessive controlled substance
- Therapeutic duplication

Preferred Medical Network (PMN) applies a three-tier DUR program with no separate fee as part of our workers' compensation pharmacy benefit administration. Contact us today to find out what other kinds of savings you can experience with our assistance.
